

Working at Datanomix:

Datanomix is a fast growing technology start-up based in Southern New Hampshire. We are building a cutting edge production analytics platform, delivering massive improvements in productivity, employee capability and company profits for our customers. We have raised the benchmark for what Industry 4.0 and data leverage should mean to American industrial manufacturers, and will continue to do so during our next major growth phase.

Engineering: Front-end Developer - HQ based

Datanomix is seeking a front-end developer to join its growing engineering team. You are a creative, customer-focused developer who loves seeing your work in the hands of happy end users. You are familiar with modern javascript frameworks such as react and node, charting libraries, and integrating with backend API's for data visualization. You have seen your code ship and be used in production in mission-critical environments.

Responsibilities:

- Translate product requirements into usable features, incorporating both internal and external feedback
- Build re-usable code and optimize re-usable modules/libraries within our web application
- Find and fix customer issues, and build unit tests for same

Qualifications:

- 3+ years' experience in front-end development
- Experience building web applications in modern frameworks such as react and node
- Experience seeing your code shipped and deployed to enterprise customers

Preferred education level: Bachelor's degree or equivalent in Computer Science

Job/Employment Type: Full-time

Location: Nashua, NH (Non-Remote)
